ANNOTATIONES SPECIALES IN OBSERVATIONES MANHEIMENSES.

JANUARIUS.

- Die 26. Vesp. regressus insignis acus magneticae, uti & postero mane. Eodem tempore magnus barometri descensus, qui ab hor. vesp. ad 7 mat. diei posteri lineas 4 aequavit. Ventus erat ex O, ubi congeries atrarum nubium, in fascias extensarum, Ad has acus magnet. inclinans perdere de sua declinatione debuit.
28. Sub meridiem multae fasciae albae crispatae, ex W in O excurrentes.
29. Aurorae borealis initium h. $5\frac{1}{2}$ vespertina, basi ejus seu nube cinerea in SW constituta. Variis primum fasciis albis distincta, quae versus h. 7 in unicam rubram latam in NO ad ipsum usque horizontem protensam, in coeli vero culmine non ita distincte cohaerentem confluebant. Hora 8, ubi rubedo hujus fasciae maxima, coelum tantum ex parte nubibus candidis praeter dictam cineream obductum, splendente luna & stellis multis micantibus. Disparuit h. $8\frac{1}{4}$. Acus magnet. immota fuit. Barometrum toto phaenomeni tempore lente ascendebat. Ventus vi magna ex SW, ex ipso aurorae borealis plaga veniebat. Vis ejus cum ipso phaenomeno cessavit, at rediit hor. 10, & tota nocte duravit intensior. A meridie multae nubes nigrae, foetis similes, transiverant.

FEBRUARIUS.

- A die 2 hujus mensis ad 9, quo tempore barometrum ad insignem altitudinem elatum stetit, & aer continuo humidus teste hygrometro, & coelum semper obductum fuit, quod alias fecus se habere solet.
- Die 14. Vespere, coelo ceteroquin sereno, paucae nubeculae cinereae in WNW, multa luce candida h. 8 disparente, circumfusae aderant. Acus magneticae variatio hoc die admodum exigua.
16. Hora $6\frac{1}{2}$ vesp. coelo sereno fasciae nubium duae in WNW, luce candida extincta h. 8 circumscriptae, videntur. Nubes hae h. $8\frac{1}{2}$ conjunctae ab horiz. ad 3 circ. gr. extensae.
28. Mane post hor. 4 fulgur in NW visum, quo ipso tempore barometrum celerrime ascendere coepit.

MARTIUS.

- Die 3. Hora 7 vesp. aurora borealis alba flammans omnino in N, vix 2 gradus ab horizonte assurgens,

ANNOTAT. SPECIALES IN OBSERV. MANHEIMENSES. 25

assurgens, radios huc illuc fulguris similes late emittens, ad hor. usque 9 duravit. Coelum plane obductum erat nubibus, aer ficcus, barometrum celeriter descendens, ventus SSW, acus magnet., sub meridiem declinationem 18 graduum notans, hora 7 ad 3 gradus regressa erat. Post meridiem multae nubes gregariae apparuerant.

APRILIS.

- Die 3. Vesp. hor. $6\frac{1}{2}$ fasciae 7 cinereae ex N in S juxta horizontem productae & luce candida circumfusae erant.
4. Vesp. nubes duae cinereae in WNW, altera horizonti infidens, altera inde sejuncta propior orienti. Haec ea parte, qua priori obversa erat, in crebras lacinias divisa erat, inter utramque vero lux candida vivida emicabat. In electrometro nubium hisce diebus copiosa electricitas, quae heri a meridie sine nube foeta ita invaluit, ut fila electrometri admodum inter se divaricarentur.
11. Vesp. plures nubes cinereae horizonti inter N & W insistentes luce candida circumfusae erant.
14. Coelum totum obductum laete rubuit in W post solis occasum, verum prognosticon serenitatis sequentis diei.

JULIUS.

- Die 15. Vesp. h. 5 tonitru ex NW, pluvia cum grandine. Quamprimum tempestas Zenith transiit, baromet. celeriter ascendit, & durante tempestate mercur. in thermomet. a 15 ad 9 gradum descendit.

ANNOTATIONES SPECIALES IN OBSERVATIONES PRAGENSES.

JANUARIUS.

Die 12. Hora 5 vesp. turbo repentinus e WSW, ad horam dimidiam durans.

13. Nocte turbo rediit e plaga eadem; pluit dein alternis vicibus fortiter; haec aëris vicissitudo duravit usque ad h. 2 pomeridianam; a quo tempore pluvia cessat, at ventus, per vices turbulentus, e SW continuat.

16. Hac die nives & pluvia alternabant frequentius, quamvis utriusque quantitas exigua fuerit; nebula vero durat die tota sibi constans densitate.

17. Hac die nebula decedit, nubes rarecebant, & nocte coelum fudissimum erat vento modicissimo e NO spirante.

18. Dies praestans, aura admodum frigida, aëre inferno nebuloso usque ad h. 11 vesp., a quo momento coelum fere repentine obductum fuit.

A 23 hujus mensis (praeprimis Planam versus) nix aliquantum confidebat in campis, licet exigua fuerit altitudine; antecederet agri omnes, in iisque segetes virore pulcherrimo vifabantur; spes frugum maxima erat.

29. Hora 6 vesp. oritur aurora borealis, perdurans usque ad 7; color erat rosaceus summitas segmenti non excedebat vigiles; fortissima erat in NW, ubi cigni constellatio suis cum stellis omnibus visa; latitudo aurorae borealis erat a W usque ad NNW; in W nubes trabeatae & immotae existebant; haec aurora etiam Planae visa est, & tribus in locis praestans adnotatur; Gottersdorfii duravit duabus horis diutius.

Mensis hic, ut ex summa omnium graduum patet, erat inter nobis notos Januarios omnium calidissimus; in hortis & pratis *Primulae* veris L. & alii flores, ut in summo vere florerunt. Status ille barometri loco admodum sublimi, & longiori tempore consistens, pariter erat inconfuetus, ut comparanti annos priores patet.

FEBRUARIUS.

Diebus 1 & 2 nives illae nocte deciduae exiguae erant, in campis patentibus congelatum fuit; die 3 pluvia illa tenui labente solvebantur lente omnia, glacies fluvii exigua rupta, flumine secundo abiit; die 6 pluvia hac tenui nives omnes consumtae; die 7 ventus WSW declinat ad S intenditque, & vehemens perdurat usque ad vesperam, remittens successive; die 9 pluvia larga, & continua; nocte diei 9 ad 10 mercurius in barometro insigniter decedit,

& die altera tanto altius, & repente ascendit, ita, ut differentia hujus variationis intra horas 24 fuerit 18, 8; stetit enim die 9, h. 10 matutina 27, 5, 5 descendit usque ad 27, 1, 0, & die 10 ascendit usque ad hor. 8 vesp. 27, 6, 8; die 12 solutio denuo repentina nivium copiofarum cum SW vento deciduarum; die 13 pluvia infecuta largissima.

Die 14 (& prius jam) *Narcissos* poeticos flore plenos in hortulo meo reperio, cum *Primulae* veris Januario mense jam defloruerint.

Die 15 aqua Muldavae admodum lutulenta.

Nocte ad 17 saeviit W ad S declinans, & in locis patentioribus omnia congelascens; regelata tamen circa 10 matutinam diei; aura erat dein vernantissima.

Die 21 nebula erat spississima tota die, sole rubicundo non nisi per trina momenta viso; die subsequa nebula humidissima, uti etiam die 23; die 28 WSW admodum impetuofus; cum eadem die h. 4 matutina Lipsiis in Saxonia (turbo hic) fulgure & tonitru audito, comitatus fuerit.

Hoc mense *Alauda* arvensis & campestris L. numero copiosiori jam circa 12 comparuit; 22 *Anates* anseres boreales L. feri turmatim advolitant; mensis hic sub initium & finem humidus erat, sub medium ficcus, vel ideo agri exficari cepere; segetesque praestantius virebant; *Turdi* pilares & simile genus avium sub finem Januarii & Februarii initium pingues reperiiebantur, cum prioribus mensibus admodum macri fuerint.

M A R T I U S.

Primi vespertiones visi sunt die 26 sub vespem copiose volitantes.

Die hujus prima nocte ventus e NW admodum impetuofus.

Diebus 22, 23, 24, 25, 27 & 30 vapor erat in atmosphaera, hygrometro Lambertiano & Deluciano ultra 200° indicante; dies tamen omnes ad finem hujus mensis erant amoenissimae; aura hujus mensis, ut ex relationibus meteorologicis mecum e pluribus locis regni nostri communicatis, erat plurimum a foris ut domi nostrae sibi similis, vapor hic ficcus sub finem mensis omnes vicinias regni, unde mihi scriptum, replebat; hyetometris opus fuisset sensibilissimis, quia quantitas aquae & nivium decidua fere semper differentialis erat, & semel iterumque mensurata libra hydrostatica cubo consueto excipi solita fere evanescebat; ficcus hic mensis spem colonis frugum demebat; licet amoenitates veris omnes tempore adfuerint; aura tepente arbores gemmescebant undique, praeprimis vero *Pruni* cerasi, *Amygdali* persicae, *Punice* mali flos copiosissimus, pulcherrimusque oculos pascebat; *Anates* boschates, *Fulices* aterrimae numero insigni aderant, *Hirundines* urbanae &c. tamen nondum comparebant; *Violae* odoratae, caninae, & hortenses summo in flore constitutae; *Lepores* timidi non pauci agros discurrere visi.

Die 10 pluviam pluit salutarem; die 11 tempestas prima circa h. 4 pom. coruscationibus vivacissimis e NW plaga; uti die 12 e SW advenit; pluvia modicissima insequente; Gottersdorfii & Planae primo loco in limitibus Saxoniae, altero ad Bavariam sito, tempestates diebus 11, 12, 13, 16 & 29 erant, pluvia omnino vix aliquando modicissima comitatae; hirundines primae Planae die 10, apud nos Pragae die 20 vivebantur; die 11 *Ranae* temporariae coaxant, at a 16 ad 24 tacent & latent; die 24 auditur *Rana* arborea; eadem die vesperti luna insigni corona eique amplissima forma elliptica, colore albo circumdabatur.

☉☉ hoc singulare phoenomenon, quod in pluribus Bohemiae locis diversimode spectabatur pertinet ad 17 Maji; cujus breviculam descriptionem & projectionem, una cum sententiis aliquot physicorum in eorum gratiam, qui cum hisce phoenomenis noti non sunt, typis publicis commisi; quamvis jam die 16 Maji vespem circa alba, & praegrandis corona solem exceperit, vespere denique lunam similis corona circumdederit, & med. 10 vespertina aurora borealis placida totam borealem plagam occupaverit, aura frigidiuscula tota media die & nocte etiam fuerit; mane tamen (die 17) aura erat omnino serenissima, nulliusque indicia phoenomeni ad usque h. 9 mat. atmosphaera subministrabat; cum repente caeruleum illud pallescere, & quasi peplo quodam tegi observaremus; circa h. 10 corona solem, & intimus halo cum cingunt; prior coloribus iridis bene distinguibilis, interior halo autem rubrum & virescentem prodebant; hi colores praecipue in parte annuli boreae & austrinae distinguebantur, cum in partibus ortiva & occidua non nisi cum difficultate colorculus observari, distinguique potuerit. Annulus hic durat invariabilis, forma magis elliptica, quam circulari, cujus diameter interior 39°, 20', exterior (quantum per vitra distinguere potuerit) 41°, 30' fuerit; med. 12 merid. alius annulus albicans priorem circumdedit, cujus centrum Zenith fere nostrum occupabat, & coloratum hunc annulum intersecabat, ita, ut productus solem intersecasset, in cujus intersectionum punctis alias ab Hevelio parhelii insidere notati sunt; hic Zenithalis circulus disparuit hor. 12½ post meridiem, reliqua jam efficta fere invariata solem comitata sunt, durantque usque ad med. 3, quo tempore phoenomenon quasi disparuit, non nisi albore, seu candore oculos admodum feriente, observato; at illico ab h. 4 interposito inter solem & oculum pileo corona solaris denuo spectanda sistitur ut ante meridiem, solo hoc discrimine, quod colorum vivacitas in illa pomeridiana corona non tam distinguibilis fuerit, quam prius; crura redeuntis circuli albi non insidebant equidem illi homocentrico;

hoc

hoc nihilominus bene excipiebatur, quod in illo cruris se quasi adcludere tentantis puncto, spuria folis imago effingebatur, quae vehementer splendescens facta, & caudata effecta est, in SW; altera vero e diametro opposita & arcui secundo insidens informis manebat, licet h. 5, 10 etiam hujus imago melius distingueretur, superne in distantia 21 graduum arcus concentricus, coloribus insignis efformabatur, cujus latitudo 56 gradus comprehenderet, in hujus convexitate alius arcus tangens conspicietur priorem, & ab eo averfus, cujus amplitudo vix 10 gradus superabat; hoc spectaculum usque ad hor. 5, 4½ constans visebatur; cum postea superiores illi arcus disparere ceperunt; corona vero illa fere circularis, ellipsim continuo longiorem imitata, cujus axis major Zenith versus, minor vero e SW ad NW plagam constituebatur, in cujus extremitatibus soles spurii & caudati sedebant; horum ille austrum versus splendore suo prius remittebat, & cauda, alter vero boream versus, utrinque vicissim incrementa sumebat, usque dum h. 6, 30, sinister etiam plene disparuisset h. 6, 4½; coronaque exterior paulatim decrevisset, pariterque evanuisset h. 7. Instrumentorum meteorologicorum situm examinabam fere horis singulis dimidiis; pro momentis temporum praecipuis notavi sequentes:

D. Director Physicae Confil. Reg. DIESBACH notavit in hygrometro Saussuriano horis hic notatis gradus siccitatis sequentes: h. 7 55°, h. 9 50°, h. 12 45°, h. 6 36°, h. 8 40°, omnia haec hygrometri gradum insignem produnt siccitatis. *Typis impressa, & praecipua phaenomena hujus Perhelii cupro incisa sunt, Pragae 1790.*

Mensis hic denuo foccus, quia pluviae omnes breves, & vix una seu apud nos, seu foris largior erat, praeter illam 28 diei, quae fegetibus in vicinia Planensi salutaris obvenit, & hac primum semen *Lini* usitatissimi terrae committi poterat; florum in *Prunis* armeniaticis, cerasisque copia insignis, nunc prodidit potissimum spuriam fuisse, vacuumque; eventus enim dedit: fructus hujus generis Planae exiguos, aliorum vero innumeros; *Scarabaei* melolonthae in via aliquae conspiciantur, quamvis sub initium veris *Scarabaeorum* stercoriorum fuerit copia; Larva *Phalaenae* neustriae praeprimis ramulos cerasinos depascebat; sub finem hujus mensis floret Planae *Hordeum* vulgare spe magna fructus colonorum.

J U N I U S.

Siccitas & calor hujus mensis magna undique erat, hinc incrementum fegetum exiguum aestivae praeprimis sementis; propterea pretium illarum repente crevit multumque. Hoc

menfe

menfe ingens *Scarabaei* melolonthae copia arborum folia, & tenellos eorum fructus ardebat; catharri, dolores colici & rheumata plurimos homines obruebant, febresque putridae grassabantur. Die 7 pruina insigni tegebatur terra, cum die 6 gelu insigne in montanis fuerit; diebus 27 & 28 aura erat insigniter frigidiuscula. Die 30 ab h. 5 vespertina usque ad occasum solis circulus ellipticus coloribus viridi rubris & flavis interstinctus solem circumdabat, quem nubes acutae, protensaeque trabium instar ellipsim occupabant situ sibi parallelo interjacentes, hic circulus Gottersdorffii & Planae, uti Pragae visus est.

J U L I U S.

Pluviae hujus mensis, licet interruptae impedimentum erant fenificii; fenum quod illatum est, destructum, & inutile magna ex parte erat; posterius quod sub finem mensis sectum est, meliori fervit usui; prata extorrita magna ex parte feni ultimi nullam spem dabant; cerasa, praeter consuetudinem in Planensi vicinia maturuere, quamquam, ut innatum fuit, numero exigua fuerint; morbi iidem ut mense praecedente, attamen absque vitae periculo, grassabantur; messis hordei in finem mensis hujus incidit, ob pluviarum parvitatem & insufficientiam exigua; mellis copia erat; vesparum insignis numerus.

Die 16 h. 11 WSW vorticosus, quem imber brevis excepit.

Die 28 quid in provincia Casioniae Barbaton contigerit, aliunde patebit; apud nos casus & die altera indigitavit.

A U G U S T U S.

Die 27 tempestas gravis cum vento vehementi sub octavam ingruit & ad 11 fere duravit, imbre intermedio deciduo.

Mensis hic prioribus quia humidior, vel propterea feminibus *Brassicae* Napi & fructus *Solani* tuberosi, & oleribus valde salutaris erat; dysenteria laborantes, praeprimis fenes, succubere; messis fegetum ordine procedebat, & bono cum successu in vicinia Planensi; hordeacea tamen ferotina; erant respectu annorum praecedentium.

S E P T E M B E R.

Pluviae omnes simul sumtae, aquarum subministrarunt incrementum nullum, hinc penuria illarum ubique factum est, ut frumentum molli non potuerit; agris tamen subigendis, & plantis diversis erant pluviae exoptatae, admodumque proficuae; *Hirundines* urbanae die 12 disparere ceperunt, solitariae tamen adhuc die 30 visae sunt; hoc mense *Amygdalus* persica & *Rubus* idaeus hinc inde florere secundo; fructus arborum insignes reperti sunt. OCTOBER.

Diebus 3, 4, 5 & 6 copiosae stellae sic dictae cadentes observatae sunt; fila divae virginis ingenti numero volitantia visuntur; speciatim die 6 *Rosa* canina dicta florens deprehensa. *Turdi* pilares sub principium macri, sub finem mensis pingues redditi; folia arborum mature decidua.

Die 23 eclipsis lunae totalis, luna in umbra terrae versante, seu tempore immersionis totalis ignium fatuorum copia insignis visa est; aura vehementer frigida; lunae discus autem ferruginei coloris permanfit, maculis majoribus bene distinctis.

NOVEMBER.

Nives primae in montanis cadunt die 28; aquarum defectus, ut in rivis & fluminibus; ita etiam in pluribus fontibus deprehensus, molendina pleraque molendis segetibus adhuc inepta.

DECEMBER.

Mensis hic praeter insignes & repentinas barometri mutationes, denuo hunc anni praecedentis characterem habet, quod tepidus fuerit, & atmosphaerae electricitatem aliquoties non contemnendam prodiderit.

OBSERVATIONES GENERALES.

Hiems abiit mitis & insigni modo sicca: initio Aprilis procella nivalis cum consequentibus pruinis, quae fructus jam florentes valde laeferunt. Mense Majo grandines plures, sub finem aestus insolitus, & ros acer folia mororum adussit. Junio grandines de vastatrices. Julius frigidior Junio non sine grandinibus, fulminibus, turbinibus. Augustus aliquanto mitior, nec non September. October sub finem magnos imbres effudit. November ac December nihil insignie attulerunt. In summa, totus annus fuit felicissimus; grandines enim peculiariter tantum loca laeferunt. Omnium frugum proventus fuit uberrimus, exceptis Pomonae muneribus, quae a pruinis mensis Aprilis laesa fuerunt: hinc fructuum, praecipue hiemalium, magna penuria, exceptis uvis. Notanda insignis barometri altitudo, praecipue primis mensibus anni; deinde paucitas pluviae; nam ab anno 1725, & quo Patavii observatur, duo tantum anni 1740 & 1762, siccitate pares deprehenduntur.
